n8n Marketing Boost Test Case

Module Name:-	n8n Marketing Boost (Facebook and Instagram)
Test Case ID	N8N-001 to N8N-015
Tester Name	Jara Joaquin T. Jara
Test Case Description	To check that boosted listings are posted, ranked, re-priced and re-posted through n8n and Groq.
Prerequisites:	1. API and worker running, with the n8n workflow active and the service token set. 2. A seller account with a listing that has a photo and stock. 3. A connected Facebook Page and Instagram account. 4. The 6-hour waits can be skipped by moving the saved times earlier.
Environmental Information:-	1. OS: Windows/Linux/Mac 2. Seller mobile app on Android, backend API and worker, n8n

Test Case ID	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
Scenario:	Post a new listing on social media (First Post).					
N8N-001	1. Add produce with a photo and stock.	Tomato, 10 kg, 1 photo	The post goes out as a normal post. Facebook and Instagram each show their own status, from "Waiting to post" to "Posted", with a View link.			
	2. Answer "Post it on Facebook and Instagram?".	Preview Post				
	3. Watch the post status.	Boost screen				
Scenario:	Boost a listing with no photo (Photo Needed).					
N8N-002	1. Open a listing that has no product photo.	Listing without photo	The app refuses with "Add a product photo before boosting visibility". Nothing is posted.			
	2. Tap Boost.	Boost button				
Scenario:	Boost a listing with no stock or a hidden one (Sold Out).					
N8N-003	1. Open a listing with 0 kg left, then an archived one.	0 kg, archived	The app refuses with "This listing is not available to boost". Nothing is posted.			
	2. Tap Boost.	Boost button				
Scenario:	Boost the same listing twice in a row (First Post Gap).					
N8N-004	1. Boost a listing.	Any listing	The app refuses with "You just boosted this product. Please wait about N hours before you boost it again." No second post is made.			
	2. Boost the same listing again right away.	Same listing				

Test Case ID	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
Scenario:	Boost from a seller who is paused or has a high fault rate (Trust Block).					
N8N-005	1. Log in as a seller with a fault rate of 15% or more.	Fault rate 15%	The app says "Priority Boost is off because your fault rate is 15% or more." or "Priority Boost is off while your account is paused." Nothing is posted.			
	2. Tap Boost.	Boost button				
	3. Repeat with a paused seller.	Paused account				
Scenario:	Call a protected n8n link without the secret key (Authorization).					
N8N-006	1. Open the listing details link for n8n with no key.	No Authorization header	Both times the backend answers 401 "Visibility boost authentication required". No product details are shown.			
	2. Open it again with a wrong key.	Bearer wrong-key				
Scenario:	Check the post text (AI Caption).					
N8N-007	1. Post a listing.	Cabbage at ₱100	The text is written by Groq through n8n and shows the real price. The AI writes no link. A wrong price is replaced by the backend's own text.			
	2. Read the Facebook post.	Facebook Page				
Scenario:	Facebook or Instagram does not post (Failure and Retry).					
N8N-008	1. Post while one or both pages refuse.	Page access blocked	The failed page shows "Did not post". Post Again goes back to "Waiting to post", not the old failure, and each page then shows its own new result.			
	2. Tap Post Again.	Post Again button				
Scenario:	Pick the next listing to boost (Ranking and 6-Hour Rule).					
N8N-009	1. Rank several listings with AHP-TOPSIS.	5 listings	The first round picks the top-ranked listing not boosted in the last 6 hours. A listing boosted under 6 hours ago is skipped, even when it ranks first, and the next one is picked.			
	2. Let the automatic round run.	Worker, every 60 seconds				
	3. Run it again within 6 hours.	Within 6 hours				
Scenario:	Automatic posting needs a yes (Auto-Post).					
N8N-010	1. Seller A says yes to auto-post and posts by hand once.	Seller A	Only Seller A's listing is picked automatically. Seller B's listing is never posted automatically.			
	2. Seller B says no, or never posts by hand.	Seller B				
	3. Let the automatic round run.	Worker				

Test Case ID	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
Scenario:	Ask the seller for the price drop (6-Hour Notice).					
N8N-011	1. Post a listing.	Any listing	The seller gets one "Set Your Price Drop" notice. If the amount and final price were already set, no notice is sent.			
	2. Move the saved time 6 hours earlier.	price_drop_setup_at in the past				
	3. Wait for the worker, then open Notifications.	Within 60 seconds				
	4. Repeat with the drop amount and final price already set.	₱10 less, final ₱70				
Scenario:	Save a price drop with missing numbers (Price Drop Check).					
N8N-012	1. Turn price drops on with no drop amount, or no final price.	Drop amount empty	The app refuses with "Set a drop amount and a final price first". The price does not change.			
	2. Tap Save.	Save button				
Scenario:	Set the price drop and lower the price (Price Drop).					
N8N-013	1. Open a boosted cabbage listing.	Cabbage at ₱100	The price goes down once to ₱90.00 and is saved. The next drop is set 6 hours later. n8n never writes to the database.			
	2. Set the drop amount and the final price.	₱10 less each time, final ₱70				
	3. Tap Save.	Save button				
Scenario:	Keep the final price (Price Floor).					
N8N-014	1. Open a boosted carrot listing.	Carrot at ₱75	The price stops at exactly ₱70.00, never lower. At ₱70.00 no cut happens and no second post is made.			
	2. Set the drop amount and the final price.	₱10 less each time, final ₱70				
	3. Let the next drop run.	Worker				
Scenario:	Post again with the new price (Second Post).					
N8N-015	1. Let the cabbage drop to ₱90.	Cabbage	The second post is a flash-sale caption written by Groq, shows ₱90, and is saved as the second post for that listing.			
	2. Open the Facebook Page.	Facebook Page
